GUILHERME SERAFIM

São Paulo, SP • Portfolio • Email • LinkedIn • GitHub

Full Stack Developer focused on **.NET and React**, with experience modernizing legacy systems and developing enterprise platforms for the financial, insurance, and govtech sectors. Experience with **C#, REST APIs, SQL, and Onion Architecture**, interfaces built with React and Material UI, as well as integrations and AI solutions.

EXPERIENCE

Full Stack Developer - Naka&Co | 02/2026 - 08/2026.

- Reduced the entry JavaScript file size by **52.4%** for a React landing page receiving **more than 300 daily visits**, from 540.93 to 257.50 kB, through code splitting, lazy loading, and deferred component mounting.
- Reduced API requests for user and company data during session initialization **from two to one** by consolidating the data into a single response and eliminating redundant calls in SevenTools.
- Developed features for **three business workflows** (sales proposals, sales diagnostics, and lead management), integrating **React/TypeScript, Python/FastAPI APIs, PostgreSQL, and AI models** in SevenTools.
- **Stack**: React, TypeScript, Python, FastAPI, PostgreSQL, Supabase, SQLAlchemy, Alembic, OpenAI API.

Mid-Level Full Stack Developer at Quipux *(Colombian e-Government multinational operating in 4 countries and 50+ cities)* **| 04/2025 - 09/2025.**

- Led the architectural migration from AngularJS to Angular 17+ in a government service management system used by thousands of public servants across **7+ Brazilian states**, reducing rendering time for critical screens by **30%** and eliminating **40** deprecated dependencies.
- Identified performance bottlenecks and reduced response times for **12+ REST endpoints** from **~1200ms** to **~600ms (50%)** by rewriting SQL queries with optimized JOINs and composite indexes in the Spring Boot backend, directly improving the experience of operators handling thousands of service interactions per day.
- **Stack**: Java, Spring Boot, Angular, TypeScript, AngularJS, PrimeNG, Tailwind CSS, SQL.

Full Stack Developer at Tokio Marine *(Japanese multinational operating in 57 countries, with US$55B+ in global revenue)* **| 08/2023 - 11/2024.**

- Architected the redesign of the billing platform for .NET 7 using Onion Architecture, SOLID, and Dapper, shortening delivery cycles for new features by **40%** and decoupling the domain, application, and infrastructure layers.
- Optimized **15+** stored procedures and queries in SQL Server and PL/SQL, reducing average execution time by **40%** and stabilizing billing operations processing tens of thousands of transactions per month.
- Modernized the billing platform's interface by migrating to React + Material UI with a standardized design system, reducing UI-related support tickets by **20%** and eliminating visual inconsistencies affecting internal operators' productivity.
- **Stack**: C#, .NET 7, React, EF Core, Dapper, SQL Server, PL/SQL, Material UI.

PROJECTS

GeoRisk - Flood Risk Analysis Platform | OpenAI Hackathon Winner |Demo | GitHub

- Architected and delivered a full stack flood risk analysis platform from scratch (FastAPI + PostGIS (Supabase) + Next.js + Mapbox), with the backend hosted on Google Cloud Run, processing geospatial data from MapBiomas via Google Earth Engine, OpenStreetMap/Overpass, and the Open-Meteo Elevation API, and delivering auditable risk scores **100x faster** than manual analyses.
- Designed an explainable AI pipeline with LangChain + GPT-4o (RAG) and vector embeddings (OpenAI + NumPy), classifying risk as Low/Medium/High with a technical rationale and reducing uncertainty in urban engineering and insurance decisions by up to **80%**.

Play Senac - Sports Court Management System | Demo | GitHub

- Designed a scheduling system in Java (Spring Boot + JPA/Hibernate) with automated priority rules, participant verification, and time-slot blocking, reducing booking conflicts by up to **70%** and ensuring transactional integrity with Bean Validation.
- Built an availability dashboard with real-time updates (Angular + RxJS), reducing waiting times for courts by **90%** and enabling instant bookings for students and staff.

EDUCATION

- **Centro Universitário Senac** - Undergraduate degree in Systems Analysis and Development - 2024-2026 (in progress)
- **Etec Abdias do Nascimento** - Technical Diploma in Systems Development - 2020-2022

ADDITIONAL TRAINING

- **AWS** - AWS Cloud Practitioner Essentials - in progress
- **Alura** - Oracle Next Education - Frontend and soft skills training - 2023
- **FIAP** - Sementes do Brasil Tech - Backend and agile methodologies training - 2023

TECHNICAL SKILLS

- Backend: **C#, .NET/.NET Core, ASP.NET Core, EF Core, and Dapper**; REST APIs, Java, Spring Boot, Node.js, Python, and FastAPI.
- Frontend: **React, TypeScript, Material UI, and Next.js**; Angular, PrimeNG, and Tailwind CSS.
- Databases: SQL Server, PostgreSQL, Supabase, Oracle/PL-SQL, MongoDB, and PostGIS.
- AI and data: LangChain, LangGraph, OpenAI API, RAG, embeddings, ChromaDB, and NumPy.
- Integrations: AI APIs, **ClickUp**, WhatsApp/Baileys, Google Calendar API, and OAuth 2.0.
- DevOps and tools: Git, GitHub Actions, Docker and Docker Compose, Postman, Linux, Nginx, and Vercel. Google Cloud Platform (GCP): Cloud Run and Google Earth Engine.
- Architecture and practices: Clean Architecture, Onion Architecture, SOLID, Clean Code, and microservices.
- Testing and quality: xUnit, Moq, FluentAssertions, WebApplicationFactory, Testcontainers, pytest, and Vitest; unit and integration testing.

LANGUAGES

- **English**: Intermediate
